

GLOBAL CENTRAL LAB SERVICES

ACM Global Laboratories offers high-quality central lab services in support of global clinical trials. Our goal is to provide the optimal mix of testing and related central lab services to successfully meet the requirements of your trial in the most effective and cost-efficient manner possible.

Our Approach

We function as an extension of your clinical teams, developing and executing smarter testing strategies that produce the best outcomes for your clinical trial research. This hands-on consultation leads to lasting relationships, built on mutual respect and trust, which continue beyond a single study. Seventy-five percent of the new studies we've been awarded are with clients we've worked with in the past two years.

Our Clinical Trial Experience

As a global central laboratory with more than 1,100 staff—including 550 laboratory professionals, a team of board-certified pathologists, a director of microbiology, a staff of flow cytometry specialists and dedicated project managers—we efficiently manage and provide expert analysis for your clinical trial research programs.

- The clinical laboratory business has been our sole focus for more than 40 years.
- We perform over 30 million tests annually, with a test menu featuring more than 1,700 assays.
- Since 1994, we have provided central laboratory services for more than 2,300 clinical studies involving over 7,000 investigator sites.

Our Global Footprint

Our global operations extend across more than 65 countries through lab facilities in the Americas, Europe, Singapore, China and India—with all tests conducted and managed from correlated locations and with seamless data management providing a single database. Our local knowledge enables us to effectively manage trials no matter where investigator sites are located. We offer standardized testing methodologies, including quality-control programs and standard global reference ranges with test results in conventional and/or SI units, with globally harmonized data.

Our Unsurpassed Project and Data Management

Our project management team has extensive experience conducting clinical trials, and is available around the clock to offer in-depth counsel throughout the entire project lifecycle. We assign a dedicated project manager to act as your central point of contact throughout the entire project, who will become well-versed in your requirements and processes. This helps us adapt our central lab services to your study's specific needs. Our data management team stays involved from the onset to ensure seamless integration throughout the entire study lifecycle. We provide laboratory results in a wide variety of formats, offer a full range of data transfer options, worked a broad spectrum of Electronic Data Capture platforms and deliver customized reports designed to meet the specific requirements of your clinical trial research.

Our Therapeutic Expertise

We have provided central lab services across a broad array of therapeutic areas, including but not limited to:

Oncology	Musculoskeletal	Dermatology
Autoimmune Diseases	Respiratory	Hematology Reproductive Health
Cardiovascular	Gastrointestinal	Human Gene Therapies
Infectious Disease	Vaccines	Renal Diseases
CNS/Neurology	Endocrinology/Metabolic	Pain Management

Our Global Logistics and Local Regulatory Expertise

With global studies accounting for more than 60 percent of our central laboratory business, we've become experts in study logistics. We can help you navigate the complexities of transporting samples and guide you through your shipping options to optimize cost and efficiency, validate compliance with local regulations, and oversee your couriers and shipments. We even provide a choice of courier, tailored to each site, and assist you in securing in-country licensing.

Experience how our central lab services can optimize your clinical trial research. Call us at 1-866-405-0400 or email us at info@acmgloballab.com to see how our clinical research laboratory can address your testing needs.
