

# TAILORING SOLUTIONS FOR YOUR CLINICAL TRIAL PROGRAM

## Work With a Team of Seasoned Pathologists

The preparation and resources needed to complete a clinical trial are significant, and you want an expert team by your side. The board-certified pathologists at ACM Global Laboratories have over 40 years of experience managing complex clinical trials and regularly see a wide variety of complex surgical pathology cases. We process more than 98,000 surgical pathology specimens and 60,000 cytology specimens a year.

Based at Rochester Regional Health, a designated cancer treatment center accredited by the American College of Surgeons Commission on Cancer Treatment, our clinical laboratory is fully licensed, CLIA-accredited, and College of American Pathologist (CAP)-accredited.

## Range of Expertise

Our pathology lab provides general and subspecialty services in both anatomic and digital pathology. The breadth and depth of our capabilities allow ACM to offer expert interpretation of nearly every type of tissue or fluid specimen encountered in research or clinical practice, and to offer expert advice about test selection.

We can determine the accurate classification of a cancer type, understand the variants in the patient and the effectiveness of a drug on a particular tumor and the markers involved. This enables our pathologists to not only ensure the most appropriate tests are chosen for the desired outcome, but that critical milestones in the trial are feasible. In addition to providing immunohistochemistry techniques, our lab offers a large catalog of antibodies.

## Collaboration is Key

We provide rigorous data collection and reporting requirements for superior pathology and cytology testing. Our specialists work directly with sponsors and also offer collaborative services with CROs to aid with appropriate study design and laboratory testing needs.

## Digital Pathology at Your Service

Our pathologists proudly provide state-of-the-art whole slide imaging, using the Leica Biosystems' Aperio AT2 whole slide scanner. This technology expands upon the anatomic pathology testing performed at ACM, while increasing our ability to scale pathology resources for sponsors and CROs conducting global clinical trials. We can send high-quality digital slides that are available for remote viewing in less than a minute.

## A More Personalized Service

With quick turn-around times and continual quality improvement, ACM provides high-quality, cost-effective services that exceed expectations. We are dedicated to providing you unsurpassed personalized service and expert interpretation for a wide range of general and subspecialty tests. Our specialists offer a powerful combination of robust testing capabilities and a wide range of data management reports to meet your specific requirements.
