

# EXPECT HIGH-QUALITY SAFETY TESTING RESULTS AND SERVICES

## Providing Expertise You Can Count On

Our network of strategically located global laboratories (as well as international partner laboratories) is the cornerstone of our ability to support clinical trials that test the safety, tolerability, and efficacy of new drugs in development. The majority of the studies supported by ACM Global involve routine safety testing and analysis, which helps our clients:

- Monitor the health of study participants throughout the course of the clinical trial
- Determine inclusion and exclusion criteria when selecting patient populations for a clinical study
- Demonstrate the efficacy of investigational agents

To ensure quality control and harmonization of lab results, our experts have taken stringent measures to ensure intra-laboratory standardized testing practices and operating procedures for each of our global sites. These measures ensure lab results are representative of experimental outcomes and not inconsistencies in testing methods.

## Reliable Safety Testing to Facilitate Your Clinical Trials

Since 1996, ACM Global Laboratories has supported over 2,300 clinical studies at 7,000 sites and over 20 million tests annually through our wholly-owned facilities in North America, Europe, Singapore & Mumbai and extended network of partner laboratories across the globe.

As a full-services global central laboratory, we provide central lab services to support phase I - IV trials across a wide array of therapeutic areas, including but not limited to: Oncology, Hematology, Autoimmune Diseases, Infectious Diseases, Cardiovascular, CNS/Neurology, Musculoskeletal, Respiratory, Gastrointestinal, Vaccines, Endocrinology/Metabolic, Dermatology, Human Gene Therapy, Renal Diseases, and other therapeutic areas.

## Rely Upon Our Team of Specialists

In addition to performing routine safety testing, the global central laboratory also provides the scientific and technical expertise needed to help design the study protocol, which defines all testing requirements for each unique clinical trial.

Our lead scientists and specially trained technologists also provide services to ensure the proper preparation and handling of specimen collection kits and samples. The central lab further supports clients by delivering detailed study reports and data interpretation assistance.

**To ensure quality control and harmonization of lab results, our experts have taken stringent measures to ensure intra-laboratory standardized testing practices and operating procedures for each of our global sites.**

For assistance planning safety testing for your next clinical trials program, contact us at [acmgloballab.com](http://acmgloballab.com).

## Accreditations & Licenses

Accredited and licensed worldwide, ACM stands ready to provide the services you need, where you need them. The short list of licenses and certifications includes:

### United States

CLIA

New York State Department of Health

State Clinical Lab Certification: California, Connecticut, Maine, Maryland, Pennsylvania

SAMHSA

College of American Pathologists

### International

NGSP Level 1 - US, Europe & Asia

Ministry of Health, Singapore

College of American Pathologists, China, Singapore, UK
